

DERMISAN plus

CLEANING AND DECONTAMINATION OF TEATS

DECONTAMINATION OF CLEANING CLOTHS

CLEANING OF HANDS

PRESENTATION

- . Transparent liquid
- Yellow
- . Undiluted pH-value : 7+/- 0,5
- . pH at 10 g/l : 7+/- 1,0
- . Density at 20° C : 1+/- 0,01 g/cm³
- . Freezing point : 0 °C

PROPERTIES

MAIN COMPONENTS

- . Gentle non-ionic surfactants
- . Disinfecting agent
- . Thickening agent

ADVANTAGES

1) GENTLE CLEANER DISINFECTANT AND SOFTENER USED FOR TEAT

PREPARATION

. Before milking, the teats carry various particles (faeces, diverse remains, straws, dust, etc.), heavily contaminated by microorganisms. The gentle cleaning bases of DERMISAN eliminate these particles without irritating the epidermis.

. DERMISAN keeps all its cleaning properties in hard water areas.

. The disinfecting agent contained in DERMISAN improves the decontamination obtained by cleaning.

2) DECONTAMINATION OF THE SOLUTION USED FOR SOAKING THE

CLEANING CLOTHS

The presence of a disinfecting agent in the DERMISAN formula controls contamination in cloth-dipping solutions. This is achieved without using hypochlorite, which can create skin irritation problems; and we use only one product.

The disinfecting agent contained in DERMISAN is chemically stable, even in the presence of contaminating material ; DERMISAN remains active during the whole period in-between milkings.

The long-lasting contact time between milkings enables DERMISAN to have a strong decontamination effect on the solution used to wash the cleaning cloths. The risk of transmitting germs responsible for mastitis is therefore eliminated during this period.

DERMISAN is bactericidal at 0,75 % according to NFT 72-150.

3) TIME-SAVING

The use of a single product to clean the udder and wash the cleaning cloths shortens the procedure, with excellent hygiene results.

4) NON-IRRITANT

DERMISAN does not irritate teats and hands thanks to the absence of chlorinated products.

USAGE

Direction for use:

Standard pattern for use :

Do not mix with another product

Cleaning of hands :

Use the product undiluted then rinse abundantly.

Cleaning and decontamination of teats / Decontamination of cleaning cloths :

- After milking :

Clean the cleaning cloths and soak them in a bucket containing 0.5% DERMISAN plus solution (5 ml for 1 L), until the following milking.

- Before milking :

Empty the bucket without wringing out cleaning cloths and cover the cleaning cloths with hot water. Add soap only if necessary.

- During milking :

Use a cleaning cloth per cow. Clean the teat with one side. Wring carefully the cleaning cloth and wipe the teat with the other side of the cloth.

PACKAGING

Jerrycan 5l Neutral 5kg

Jerrycan 10l Pale green 10kg

Small barrel 60l Dark blue 60kg

Container 1000l 1000kg

Jerrycan 22l Pale green 22kg

If the product has not been used within 12 months from its manufacturing date but the storage conditions have been complied with, an extension can be granted. In this case, contact the commercial department.

SECURITY

Stocking : temperature 5 - 30 °C

LEGISLATION

This product conforms with legislation regarding surface cleaning products allowed in contact with foodstuffs, products and beverage for human and animal consumption.
